

The Beauty and Joy of Computing

Lecture #4 **Programming Paradigms**

EECS Lecturer

NEST LABS BUYS DROPCAM Pierce Vollucci FOR INTERNET OF THINGS

Google's Nest Labs is becoming another active player in the Internet of Things with Quirky and Apple. Companies race for adoption via the network effect. However, consumer adoption relies not only on the platform but on how the platform provides a useful programming paradigm for software developers.

Programming Paradigms Lecture

- What are they?
 - Most are Hybrids!
- The Four Primary ones
 - Functional
 - Imperative
 - Object-Oriented
 - OOP Example: Skecthpad
 - Declarative
- Turing Completeness
- Summary

@ 000

UC Berkeley "The Beauty and Joy of Computing" : Programming Paradigms (2)

en.wikipedia.org/wiki/Programming paradigm What are Programming Paradigms?

- "The concepts and abstractions used to represent the elements of a program (e.g., objects, functions, variables, constraints, etc.) and the steps that compose a computation (assignation, evaluation, continuations, data flows, etc.)."
- Or, a way to classify the style

of programming.

UC Berkeley "The Beauty and Joy of Computing" : Programming Paradigms (3)

- a) 1 (functional)
- b) 1 (not functional)
- c) 2
- d) 3
- e) 4

@000

UC Berkeley "The Beauty and Joy of Computing" : Programming Paradigms (4

Most Languages Are Hybrids!

- This makes it hard to teach to students. because most languages have facets of several paradigms!
 - Called "Multi-paradigm" languages
 - Scratch too!
- It's like giving someone a juice drink (with many fruit in it) and asking to taste just one fruit!

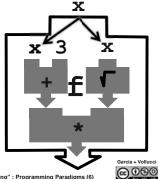

@000

- Computation is the evaluation of functions
 - Plugging pipes together
 - Each pipe, or function, has exactly 1 output
 - Functions can be input!
- Features

 - No state · E.g., variable assignments
 - No mutation
 - E.g., changing variable values
 - No side effects
- Examples (tho not pure)
- Scheme, Scratch BYOB

 $f(x) = (x+3) * \sqrt{x}$

UC Berkeley "The Beauty and Joy of Computing" : Programming Paradigms (6

UC Berkeley "The Beauty and Joy of Computing" : Programming Paradigms (5)

en.wikipedia.org/wiki/Object-oriented programming Object-Oriented Programming (OOP)

- Objects as data structures
 - With <u>methods</u> you ask of them
 - · These are the behaviors
 - With <u>local state</u>, to remember
 - · These are the attributes

Classes & Instances

- Instance an example of class
- E.g., Fluffy is instance of Dog
- Inheritance saves code
 - Hierarchical classes
 - E.g., pianist special case of musician, a special case of performer

ww3.ntu.edu.sg/home/ehchua/programming /java/images/OOP-Objects.gif

Examples (tho not pure)

Java, C++

UC Berkeley "The Beauty and Joy of Computing" : Programming Paradigms (8)

OOP Example : SketchPad en.wikipedia.org/wiki/Sketchpad

UC Berkeley "The Beauty and Joy of Computing" : Programming Paradigms (7)

Dr. Ivan Sutherland

ans = (x+3) * ans

Examples: (tho not pure)

return ans

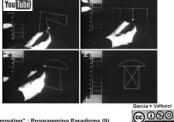

Pascal, C

- "Father of Computer Graphics"
- 1988 Turing Award ("Nobel prize" for CS)
- Wrote Sketchpad for his foundational 1963 thesis
- The most impressive software ever written
- First...
 - Object-oriented system
 - Graphical user interface
 - non-procedural language

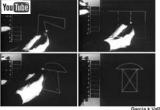

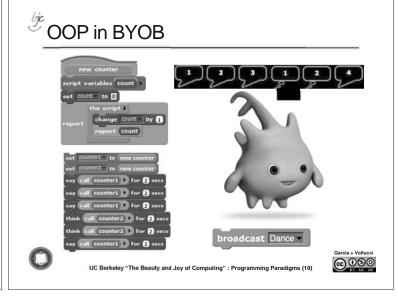

Spent the past few years doing esearch @ Berkeley in EECS dept!

@000

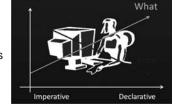

UC Berkeley "The Beauty and Joy of Computing" : Programming Paradigms (9)

en.wikipedia.org/wiki/Declarative_programming **Declarative Programming**

- Express what computation desired without specifying how it carries it out
 - Often a series of assertions and queries
 - Feels like magic!
- Sub-categories
 - Logic
 - Constraint
 - · We saw in Sketchpad!

Anders Heilsberg "The Future of C#" @ PDC2008 channel9.msdn.com/pdc2008/TL16/

Example: Prolog

Declarative Programming Example

· Five schoolgirls sat for an examination. Their parents - so they thought - showed an undue degree of interest in the result. They therefore agreed that, in writing home about the examination, each girl should make one true statement and one untrue one. The following are the relevant

passages from their

letters:

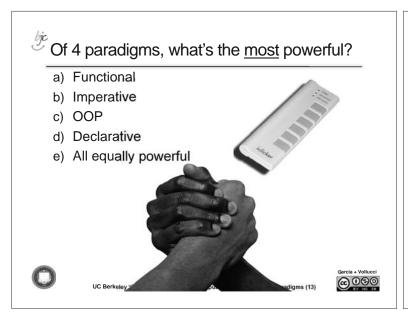

- Bettv
 - Kitty was 2nd
- I was 3rd
- Ethel
 - I was on top
 - Joan was 2nd
- Joan
 - I was 3rd
 - Ethel was last
- Kitty
 - I came out 2nd
 - Mary was only 4th

- I was 4th
- Betty was 1st

UC Berkeley "The Beauty and Joy of Computing": Programming Paradigms (12)

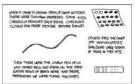

en.wikipedia.org/wiki/Turing_completeness
Turing Completeness ironphoenix.org/tril/tm/

- A <u>Turing Machine</u> has an infinite tape of 1s and 0s and instructions that say whether to move the tape left, right, read, or write it
 - Can simulate any computer algorithm!
- A <u>Universal Turing Machine</u> is one that can simulate a Turing machine on any input
- A language is considered <u>Turing</u> <u>Complete</u> if it can simulate a <u>Universal Turing Machine</u>
 - A way to decide that one programming language or paradigm is just as powerful as another

Turing Machine by Tom Dunn

Xkcd comic "Candy Button Paper"

UC Berkeley "The Beauty and Joy of Computing" : Programming Paradigms (14)

en.wikipedia.org/wiki/Programming_paradigm

Ways to Remember the Paradigms

- Functional
 - Evaluate an expression and use the resulting value for something
- Imperative
 - First do this and next do that

- Object-oriented
 - Send messages between objects to simulate the temporal evolution of a set of real world phenomena
- Declarative
 - Answer a question via search for a solution

www.cs.aau.dk/~normark/prog303/html/notes/paradigms_themes-paradigm-overviewsection.html

UC Berkeley "The Beauty and Joy of Computing" : Programming Paradigms (15)

- Each paradigm has its unique benefits
 - If a language is Turing complete, it is equally powerful
 - Paradigms vary in efficiency, scalability, overhead, fun, "how" vs "what" to specify, etc.
- Modern languages usually take the best from all
 - E.g., Snap!
 - · Can be functional
 - · Can be imperative
 - · Can be object-oriented
 - Can be declarative
